

Welcome

Thank you for registering for our **Spring Break STEAM Kit**. In this box, you will find all the materials needed to complete 4 hands-on projects with your young learner(s).

This kit is focused on exploring properties of an important historic and modern material - rubber! Accompanying each project is a worksheet that will explain a property of rubber and provide you with instructions on how to complete each experiment. These are designed to provide you with information to guide your learner(s) and help you facilitate each project. *Feel free to simplify or prompt further discussion depending on the level most appropriate for your learner(s).*

We hope these kits will inspire your learner(s) to think more critically about materials they encounter in their everyday life and where things come from. **We encourage you to check out our short, introductory video that explores the history of rubber before you tackle the projects in this kit. It can be accessed here - <https://whstarkhouse.org/steam/>.**

Have fun and enjoy!

Hannah Danielson + Joshua Cole

Please remember to supervise your learners at all times while working with the materials in this kit.
