

Build Your Own Light Feature

You will need the following supplies:

- Paper lantern
- Colored tissue paper
- Sponge brush
- Markers
- Battery powered string lights

Use your imagination and create a light feature!

Here are a few things you could do:

- **Mix glue with water, and paper mâché the exterior of the lantern in a stained glass pattern using the colored tissue squares.**
- **Color the lantern with markers and create a unique design.**
- **Cut the lanterns in half and use the wire to create different shapes.**
- **Tape the lights to the inside or punch holes in the lantern and weave the lights through it.**

There are no right or wrong ways to do this. If you make a mistake, keep going. Some of the best inventions are the result of mistakes. If there are other items in your classroom or home that you need to use (such as tape or paperclips for your lights) be sure to ask your teacher for them.

Most importantly, have fun and be creative!
